

Technical Project Manager

£ competitive salary | flexible working | 25 days annual leave | 5% company pension | private medical insurance | life assurance cover | blended home and office working | employee assistance programme | paid volunteer leave | regular social and wellbeing events and much more |

We are searching for a technical project manager to join our dynamic team and tackle some of the most transformational projects in the smart energy industry. The position is ideal for a candidate who has experience of managing demanding product development programmes, drawing on a strong technical understanding to support brilliant delivery. The successful candidate will be joining an innovative company with an expanding product range, delivering solutions to millions of homes in the UK beyond each year. Please apply now or get in touch with recruitment@geotogether.com to find out more.

*Please note this role is currently 100% remote until coronavirus restrictions ease.

Our Business

geo aims to create a sustainable future where every household can manage its overall consumption and carbon footprint, without even having to think about it. In addition to providing management systems and data analysis for solar, EV and home heating, the company is the leading supplier of in-home displays to the UK Smart Metering programme and has deployed +6 million units to date. A recipient of the Queen's Award for Innovation, geo combines its smart energy displays, control and automation capabilities with leading edge data science, AI, cloud, firmware, UX, UI and customer insight to create complete carbon management systems.

The Position

We are looking for an experienced technology project management professional, with strong business acumen, technical understanding and the personal drive to take ownership of the development of a product and to deliver on time and to budget. Your role will require work with our customers and with our product management, sales, support, development and marketing teams, as well as with our third party production partners, to define and deliver high volume consumer products in the smart energy space. Key to the role is delivering the right product at the right time, managing the process from inception through to, and including, initial mass production.

You will be an experienced project manager, ideally with a background of working in a fast-paced businesses, where you are required to be flexible and to use your initiative in delivering to tight timescales with efficient use of resources.

geo | 3 St. Mary's Court | Main Street | Hardwick | Cambridge | CB23 7QS | UK

Green Energy Options Ltd. is registered in England. Company number: 5783558. VAT Registration: UK 896 6052 79

Key responsibilities include:

- Delivering our next generation hardware and software platforms
- Running critical software and hardware development projects, reporting to the COO
- Maintaining full accountability of project budgets, schedule and deliverables
- Working with manufacturing and development teams and other stakeholders to define and maintain project deliverables
- Reporting to, and being a member of, our Programme Board
- Running daily “stand-ups” with the development team
- Coordinating efforts with the technical department heads and other project managers to balance resources and delivery schedules
- Running the Jira backlog for owned projects

Requirements

You will be an experienced project manager, ideally with a background of working in fast-paced businesses where you are required to be flexible and to use your initiative, people, and organisational skills to deliver to tight timescales with efficient use of resources.

More particularly we are looking for someone who has:

- Agile project management experience;
- A software and / or hardware technical background;
- An understanding of smart grid and/or smart metering would be advantageous;
- An understanding of mains electricity (formal qualification not required);
- Experience of managing product introduction from concept to delivery;
- Experience in managing the delivery of connected services and large, data-orientated software projects;
- A proactive approach with attention to detail;
- Degree-level education and relevant professional qualifications; and
- A practical, hands-on project management approach and problem solving attitude.
